

FACT SHEET

Building Approvals (domestic)

Approval of building work

A building development approval is required prior to commencing construction on most types of domestic building work.

These approvals are also known as **building approvals** and can be sought from a private building certifier. Please refer to **Table 1** (below) for a list of common building projects that require a building development approval.

Role of a building certifier

A licenced building certifier is responsible for assessing whether proposed building work complies with the Building Act 1975 and associated codes and standards. The building certifier who issued the building approval must also carry out certain inspections to determine if the building work complies with the approval. Building certifiers will also be able to advise whether a building approval is required.

Works that do not need an approval - accepted development

Some minor building work is deemed accepted development under Queensland's *Planning Act 2016*. This means that while a building approval may not be required, the owner must ensure it complies with any applicable standards, such as structural sufficiency, size limits, the planning scheme or the Queensland Development Code.

Examples of building work categorized as accepted development include:

- small tool shed, stable or the like up to 10 square metres in area;
- a fence not more than 2 metres high (but excludes swimming pool fencing);
- a one metre high retaining wall (providing no loads are imposed above it, such as a building or driveway).

A full list of accepted building work can be found in the schedules of the Building Regulation 2006, which you can access the legislation by visiting the website: www.legislation.qld.gov.au

Owners are responsible for complying with the planning scheme and should make formal enquiries with the Council before starting any work.

Inspections

For works that are the subject of a building approval, certain **inspections** are required by the building certifier at particular stages of construction.

FACT SHEET

Building Approvals (domestic)

An example of the required inspections for a dwelling are:

- site inspection;
- foundation and excavation stage;
- slab stage;
- frame stage; and
- final stage.

Supervision and quality

It is the **shared responsibility** of the contractor and owner to ensure the building work is carried out in accordance with legislated standards. If you have concerns about the quality of the building work, we recommend that you contact the Queensland Building and Construction Commission on 139 333, who offer a complaint and dispute resolution service. Further information is available at <http://www.qbcc.qld.gov.au>

Do I need a building approval to repair my home or other building?

Where the work involves repairing or replacing fixtures or wall or ceiling linings, kitchen cupboards, vanity units or floor coverings, a building approval is generally not required.

However, when the work is being carried out, it is important that all materials are “fit for purpose”, meet relevant Australian Standards and linings are fixed in accordance with the manufacturer’s installation instructions.

If you have concerns about the quality of materials or installation, we recommend that you contact the Queensland Office of Fair Trading on 13 74 68. Further information is available at <http://www.fairtrading.qld.gov.au>

If more extensive work is required that affects the structural components of the building, then a building approval may be required in accordance with the Building Regulation 2006.

Finalising your building approval

Where a condition of the building approval requires the building work to be completed by a particular time, just prior to that time, the private building certifier is required to send a reminder notice that the approval will lapse. If it is not completed by that time, then the approval will lapse.

Your private building certifier may extend the period provided you request the extension before it lapses.

FACT SHEET

Building Approvals (domestic)

Council highly recommends that you arrange for a final inspection and ensure that you obtain your final certificate to avoid unnecessary future consequences. An approval that has not been finalised has the potential to impact on future property transactions or may affect the outcome of insurance claims. Further, it is the only way to ensure your building work has been inspected at the relevant stages.

Further information

For further assistance please refer to Council's fact sheet relating to the building approval process, or contact Council using the details below (in the document footer).
