

### Logan's Eco Champions

The Logan River Branch of Native Plants Queensland—a not for profit organisation, which helped produce the publication *Mangroves to Mountains*—is one of many volunteer organisations dedicated to helping look after the environment.

The group's 30 members do much more than identify native species. They also propagate and grow them at their nursery near the Eagleby Wetlands, then provide them to the public at events such as the annual Logan Eco Action Festival (LEAF).

The group is currently in the process of sourcing permits to grow threatened plant species to help ensure their survival.

Another native species champion is Bushcare Services of Bethania, which plants an average of 100,000 native species each year across South East Queensland. The company is certified under international quality accreditation for Environmental Management.
