

# Integrated Local Transport Plan

## Fact Sheet

### Integrated Local Transport Plan

*A convenient, efficient and safe transport network is vital to Logan's community wellbeing and economic prosperity. A good transport system ensures people can access employment, essential services and participate in the life of the community.*

#### About the ILTP

To ensure we have a transport system that meets our current and future needs, Logan City Council is developing an Integrated Local Transport Plan (ILTP).

The ILTP will guide the delivery of an effective, integrated and resilient transport system that accommodates anticipated growth and adapts to change.

The ILTP will:

- identify short and long-term priorities for transport planning
- identify challenges and opportunities for improvement
- guide future network investment
- consider population growth and economic factors
- align with state government transport and land use plans and policies.

#### Purpose of the ILTP

The ILTP will play a critical role in defining the strategic direction of Logan's transport system through to 2041.

- The ILTP will set consider the following transport system objectives:
- economic
- safety
- social
- environmental
- integrated

#### Working together

To ensure the ILTP addresses local needs and reflects new and emerging transport challenges, it will be delivered with input from key stakeholders, as well as the broader Logan community.

The ILTP will reflect the community's environmental, social and economic aspirations and will work towards the cities vision of building our communities, our businesses and our pride.

#### Have your say

The needs of the community, industry and other transport users will be central to developing the ILTP.

To help identify the vision and priorities for the ILTP, a number of workshops are being held across the area in late 2017. These workshops will then inform a broader community survey to confirm the vision and goals.

There will be further consultation with the community in early 2018 once the draft ILTP is developed.
