Notice of work

Temporary changes to your drinking water supply.

Maintenance is being carried out in the Marsden Water Supply Zone and surrounding areas.

What is happening?

Logan Water is conducting essential maintenance on the water supply network. This work is necessary to keep the water network clean and to continue to meet the requirements of the Australian Drinking Water Guidelines. The disinfectant in the water supply will change from chloramine to chlorine while this maintenance occurs.

Where is it happening?

This work will affect properties in the following suburbs that are provided water in this supply zone: parts of Berrinba, Browns Plains, Crestmead, Heritage Park, Loganlea, Logan Reserve, Marsden, Meadowbrook, Park Ridge and Waterford West.

When is it happening?

Work will be carried out throughout July and August 2025. Your area may notice changes for approximately 8 weeks from 1 July 2025.

What can I expect?

No water disruptions will be required for residents during this work.

- You may notice a slight change in the taste, odour and/or appearance of your water.
- The best way to reduce any chlorine odour or taste is to fill an open jug and leave it in your fridge overnight.
- If you notice discolouration, we recommend you run the first external tap and external tap furthest from the water meter for

approximately 5 minutes until it runs clear. Flushing a domestic tap for 5 minutes uses about 75 litres of water, which costs about 30 cents. The water can be collected in a bucket and used on your garden.

- If you do not have external taps, we recommend you run the cold water tap in the bathroom or kitchen for approximately 5 minutes until it runs clear.
- If your water remains discoloured after running your tap for a few minutes, please call 3412 3412 press 1 and we will investigate and organise for the water main to be flushed again if needed. Logan Water apologises for the inconvenience this work may cause while this essential maintenance is carried out.

This maintenance to the water supply network is carried out in winter each year.
